

Project Design Phase Proposed Solution Template

Date	22 September 2026
Team ID	SWTID-2026-6491
Project Name	Import Data using Transform Maps
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employee data reaches HR and ServiceNow administrators as Excel spreadsheets and has to be moved into ServiceNow. Entering it by hand is slow and error-prone, the spreadsheet columns do not automatically match the ServiceNow fields, and importing the same or updated file again creates duplicate employee records.
2.	Idea / Solution description	Load the spreadsheet (Employee_proj.xlsx, 15 employee records) into an Import Set table (Employee Import) and use a Transform Map (Sample Spreadsheet Import) to map Employee ID, Name, Email ID, Department and Location to the custom Employee Test table. Coalesce on Employee ID updates existing records and inserts only new ones. Three reports (by department, by location, list) are added to the Employee Analytics Dashboards.
3.	Novelty / Uniqueness	Built only with standard ServiceNow features (Load Data, Import Set, Transform Map, Reports) with no custom scripting. Coalesce makes the import safe to repeat: a re-import of 4 rows gave 2 inserted and 2 updated, and loading the same file again gave 0 inserted, 0 updated and 4 ignored.
4.	Social Impact / Customer Satisfaction	Removes repetitive manual typing, gives accurate and duplicate-free employee records, and lets HR see employees by department and location on a dashboard, so decisions are quicker and users are more satisfied.
5.	Business Model (Revenue Model)	Internal efficiency solution rather than a product for sale. Value comes from saved manual effort, cleaner data and faster reporting, and no extra licence or server is needed because it runs on the existing ServiceNow platform.

6.	Scalability of the Solution	The same Import Set and Transform Map pattern can be reused for larger files, further imports and other tables. Fields can be added to the target table and mapped, and the import can later be extended to scheduled or LDAP/REST sources.
